

### **Introduction to LCOE and Modelling**

### DR GORDON DALTON UCC MAREI

# Background

- Who Am I and my role in the development of Exceedence
- Scale of the renewables industry globally
- Stakeholders and drivers
- What makes a model and why
- Who needs them and why

#### RENEWABLE ENERGY INVESTMENTS: MAJOR MILESTONES REACHED, NEW WORLD RECORD SET

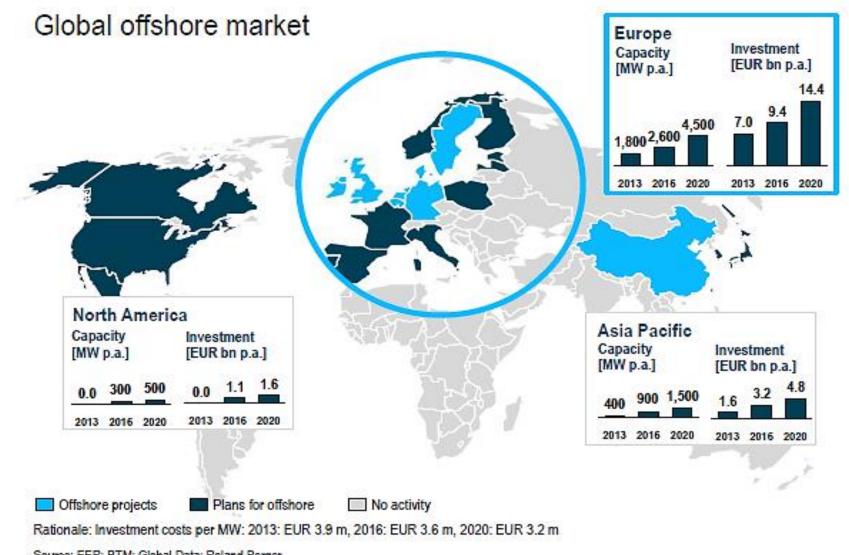

Renewables attracted more than double the \$130 billion committed to new coal and gas generation.

## Energy added by source globally, 2015

Source: EER; BTM; Global Data; Roland Berger

### OCEAN ENERGY - Volumes and Costs to Reach Industrial Roll-Out

- Ocean Energy Europe <u>provisional</u> estimate December 2015
- Prototype/Demonstration/Pre-commercial to industrial roll-out
  - Wave: 420 MW and €4.3bn
  - Tidal: 400MW and €3bn
  - €4.9bn (67%) of total cost of €7.3bn attributable to distant Pre-Commercial stage involving 600MW (300MW each)

### **Stakeholders**

#### **Energy Device Developers**

#### Energy Farm Project Developers

#### Electrical Utilities and Grid Operators

THAT THE FIT

Teaching & Training & Research Centres

### Suppliers & OEMS

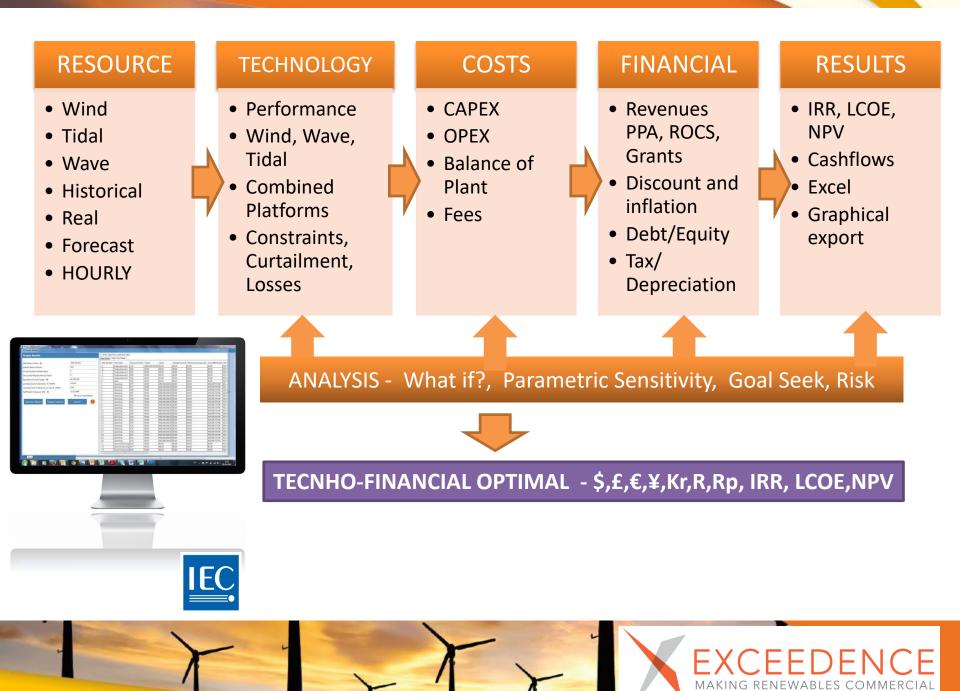

### Engineering Consultancies, Lenders Engineers

#### Financial Services, Investments, Banks, M&A

# Questions to Answer with models

- Calculates Energy Output & Financial Returns
  - What is the best device at your location
  - What is the best location for your device
  - What level of FIT support is required
  - Time for the project to produce a return
  - KPIs of LCOE, NPV, NPV/MW, IRR, Annual Cash flows
- Will I Make Money and WHEN?

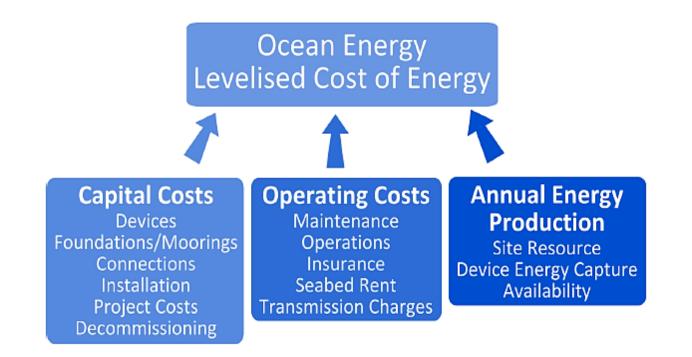

MAKI

## **Financial Indicators**

• LCOE, IRR, ROI, NPV, NPV/MW

# **Adoption of Models**

- National Funders
- European Funding
- Private Equity
- Supply Chain

# Summary

- Everyone in the renewables eco-system needs to use techno-financial models
  - Decision tool
  - Benchmark technologies
  - Measure progress
  - Strategic planning
- All indicators are neccessary
- Money will NOT flow without them
